

## CUSTOMISED SOLUTIONS OF CONNECTIVITY FOR FLEET MANAGERS

Velco supports urban mobility professionals to accelerate their development through its connectivity solutions.

### CONNECTIVITY FOR FLEET MANAGERS

Velco Fleet supports you to optimize the management of your fleet of vehicles (bikes, scooters, motorcycles...) and to create value for your customers. The fleet manager chooses a connected product that will collect data, to integrate to his vehicles. Data is customised according to the needs of the activity and is gathered and analysed on a dedicated platform.

### BENEFITS OF VELCO FLEET

- 1 Optimized management and operational maintenance**  
Secure vehicles and reduce costs by exploiting critical data.
- 2 Better market knowledge**  
Understand the use of vehicles to better meet user expectations.
- 3 Improved user experience**  
Provide users with turnkey services for their safety and comfort.
- 4 Quantified analysis of your activity and its impact**  
Get reliable data to enhance, promote and improve your services.

## PRODUCTS AND SERVICES TO BUILD THE SOLUTION

In order to harness the data that will drive your business, Velco has created products to collect it. Velco offers 3 fully integrated smart tracking products to meet all the needs of fleet managers and provide an enhanced end-user experience.

### Onitrax

The most compact (74,1\*33,2\*13,4 mm) and accessible high-performance tracking system on the market, easy to integrate on all vehicles.

Onitrax offers real-time tracking and information on the use of vehicles (e.g. km done, € saved compared to the car) and users (gender, age).

### Nuotrax

State of the art technology to remotely collect data from your vehicles. As bike handlebars or as a universal box, Nuotrax offers real-time tracking and information on the vehicles, the use of vehicles (e.g. km done, € saved compared to the car) and users (gender, age) and allows remote controls (e.g. blocking the vehicle's electric power assist remotely).

### Wink Bar

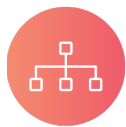

As two models for all bikes, the connected handlebar Wink Bar turns any bike into a connected bike with an intuitive and safe experience for the final user.

Wink Bar offers real-time tracking and information on the use of vehicles (e.g. km done, € saved compared to the car) and users (gender, age).

Webfleet manager gathers vehicle, user and trip data. Thanks to this customised platform gathering all data collected by our connected products, you will be able to manage, to analyse, to valorize and carry out complete reports of your activity.

Geofencing

Fleet management

Accident detection

Data collection

Business Intelligence

#### Application examples:

- Live position and status of the vehicle
- Information on users (gender, age, etc.) to better adapt your offer
- Information on vehicles and uses (battery, km, duration...) for R&D
- Creation of notifications (when the bike reaches 500km...) in order to trigger a commercial offer

With Velco Fleet, Velco offers a customised connected solution for all types of fleets, based on the collection and analysis of key data.
